

TODO 1

COMPLETE THE LINE 2 CONTROL CABINET

WHY THIS MATTERS

Make one real cabinet the standard that every future cabinet will follow.

TARGET

From the facility map, open the Line 2 cabinet and immediately understand what it is and what is inside it.

DO THIS

- ☐ Add the cabinet name / ID and exact plant location.
- ☐ Add the black-and-white cabinet layout.
- ☐ Attach the real cabinet photos.
- ☐ Add the device list and known manufacturer / model information.
- ☐ Add supply voltage, control voltage, status, and useful notes.

DONE WHEN: The deployed site lets you click the Line 2 cabinet and see a useful, organized cabinet record.

FIELD / CODEX NOTES

TODO 2

MAKE THE CABINET DRILL DOWN INTO DEVICES

WHY THIS MATTERS

Turn the cabinet from a picture into a usable equipment map.

TARGET

Build the path: Facility -> Area/Line -> Cabinet -> Device.

DO THIS

- ☐ Create a device record for the PLC.
- ☐ Create device records for VFDs, power supplies, relays, contactors, terminal blocks, and other major components.
- ☐ Connect each device to the cabinet with CONTAINS / PART OF relationships.
- ☐ Make each device clickable from the cabinet view.

DONE WHEN: You can open the Line 2 cabinet, click a device, and see that device's own record.

FIELD / CODEX NOTES

TODO 3

ATTACH EVIDENCE TO IMPORTANT INFORMATION

WHY THIS MATTERS

Separate what is known from what still needs field verification.

TARGET

Every important claim can show where the information came from.

DO THIS

- ☐ Use simple statuses: VERIFIED, FIELD VERIFY, INFERRED, UNKNOWN.
- ☐ Allow records to reference photos, drawings, nameplates, field notes, and manuals.
- ☐ Mark uncertain information instead of treating it as fact.
- ☐ Use the Line 2 cabinet as the first fully evidence-backed example.

DONE WHEN: A user can tell what is verified, what needs checking, and what evidence supports the record.
